Trans. of Akademiya Nauk SSSR. Doklady, 1960, v. 132, no. 6, p. 1299-1302.

A study was made of the first stages of the photoconductivity relaxation of high-vacuum-sublimated layers (from 0.1μ to several microns thick) of metal-free and Cu- and Mg-containing phthalocyanin deposited on quartz or mica surfaces with Pt or Au electrodes. The taumeter method of N. A. Tolstoy et al. (Uspekhi Fiz. Nauk 41: 44, 1950) permitted the simultaneous observance on a CRO of the entire process of growth and fall-off of the photocurrent. In most cases the growth curves were unsymmetrical and nonexponential. Fall-off follows the hyperbolic law, which suggests the bimolecular process of recombination.
